

ELECTRICAL PRODUCTS—OEM

Sigma is a world leader in the manufacturing of precision metal and plastic products. We are the ideal partner for manufacturers and retailers, because we offer turnkey solutions starting from initial product design, in-house tooling, testing and agency approvals, final assembly, all the way up to customer specific packaging. In addition, through world class supply chain management, Sigma offers flexibility in delivering custom inventory and late point packaging programs to meet our customers' unique service objectives.

Market Sectors

Residential, Commercial & Industrial Electrical Construction: Sigma is a trusted manufacturer of a complete line of UL listed and CSA certified electrical fittings and hardware for the industrial, commercial, and residential construction industry. We have over 30 years experience manufacturing fittings in high-pressure die cast aluminum and zinc, sand cast copper alloys, ductile iron and gray iron, and steel products. We design and produce fittings for all standard conduit and cable systems including: Rigid Conduit, IMC, EMT, Flexible Metal Conduit, BX/MC/AC Cable, Liquid-Tight Conduit, Service Entrance Cable, Flexible Cord, and Non-Metallic Cable, as well as an extensive line of grounding products.

Sigma is also the industry leader in outdoor weatherproof products. The weatherproof product line is designed, tested, and UL approved to meet or exceed all applicable NEC requirements for wet and damp locations. The product line includes a range of die cast metal weatherproof boxes, covers, and lampholders.

Power Transmission & Distribution: The North American Power Transmission and Distribution industry relies on Sigma for its product needs. Power line hardware and transformer connectors are among the many different offerings, designed and manufactured in collaboration with customers. Products are made using a variety of processes, like sand casting, die casting and permanent mold casting.

Contract Manufacturing: Sigma offers end-to-end, cost effective, and innovative solutions to OEM customers worldwide with a focus on quality, cost, delivery, safety, and the environment. As a contract manufacturer, Sigma produces assemblies containing metal castings and injection molded components.

Capabilities

Sigma's engineering and manufacturing capabilities coupled with unsurpassed quality and supply chain logistics make Sigma truly a one-stop shop for customers' needs. We offer the lowest total cost of ownership for OEM's and retailers by combining the competitiveness of overseas manufacturing with the responsiveness and service of a US based company.

Supply Chain Logistics: Sigma has all the capabilities required to provide customers with a total supply chain solution. US based sales, customer service and supply chain management teams support our customers' planning staff to ensure appropriate inventory levels, on-time deliveries and high fill-rates. The Garner, NC headquarters utilizes a state of the art Warehouse Management System (WMS) to precisely track inventory throughout the supply chain. The sales process can be completed with Electronic Data Interchange (EDI) for order entry, invoicing, Advance Shipping Notice (ASN) and funds transfer. We have the ability to integrate Point of Sale (POS) data to offer Vendor Managed Inventory (VMI) programs.

In addition to service levels which meet or exceed most US manufacturers, Sigma offers best in class solutions to meet fluctuations in demand. Every plant follows lean manufacturing principles to drastically reduce production lead times and produce lot quantities that are synchronized with customer demand. All plants and the US warehouse operate under one Enterprise Resource Planning (ERP) system, which allows for complete and instantaneous visibility into orders and stocking levels and expedites reaction to demand fluctuations.

Sourcing: Sigma has global sourcing capability for procurement of raw material from world-class suppliers. Key strategic suppliers are backward integrated with lean principles to improve efficiency and eliminate waste. Extensive programs have been implemented with suppliers for vendor development, evaluation, processing and self certifications.

Design for Manufacturability: Sigma develops products tailored to a customer's specific requirement with quick turnaround, using Design for Lean Six Sigma (DLSS) methodology. Over 125 engineers are employed in the areas of product design, tool design, project management and manufacturing engineering. Designers use the latest CAD/CAM software which helps integrate product design, tool design, and tool manufacturing. Mold flow software helps predict mold flow before the die is actually built thereby reducing tool trials and modifications and shortening the development lead time.

Foundry Operations: Sigma maintains eight world-class foundries in India, offering a broad range of technology platforms – die casting, permanent mold casting, and sand casting. We are capable of producing numerous alloys of zinc, aluminum, copper, and iron. Sigma can also provide high precision stampings, extrusions and injection moldings at a competitive price.

Machining and Assembly: Sigma manufactures and assembles complex sub-assemblies using state-of-the-art CNC machines and in-house developed Special Purpose Machines (SPM). This gives us the ability to machine and assemble products with high reliability and repeatability.

Finishing Operations: We can provide a variety of finishes on our products depending upon the application or customer's requirements. These include zinc plating, tin plating, silver plating, powder coating, liquid painting and hot dip galvanizing. All finishing facilities are RoHS compliant. Sigma offers a wide range of packaging options for its retail and OEM customers. Current capabilities include blister packing, bagging, shrink wrapping, clamshells and cartons.

Quality: OEM customers look for reliability and responsiveness and Sigma meets and exceeds these expectations by having all plants rigorously conform to quality systems in accordance with ISO 9001. This includes having in-house certification laboratories to test and certify all products at all locations. All of our plants have the ability to perform certification tests under UL's Witness Test Data Program, thereby enabling faster product approvals.

*No overseas manufacturer can deliver better supply chain solutions in an unpredictable market. With our capabilities to design new products and control the entire manufacturing process from raw material to manufacturing to final packaging,
Sigma is the ideal partner to deliver new products in a competitive market.*

Zinc Set Screw Connectors

Application

Used to connect EMT to steel outlet box or other metal enclosure

- Approved for use in concrete-tight locations
- Sizes 2-1/2", 3", 3-1/2" and 4" approved for use with EMT / Rigid / IMC
- Assembled with die-cast zinc locknut
- Die-cast from high strength zinc alloy
- Available with or without 90° C rated insulator

Standards

Aluminum Set Screw Conduit Bodies

Application

Used with EMT for providing access to the interior of a conduit system for pulling, splicing, inspection, and maintenance

- Flat back design for easy mounting close to walls
- Set screw hubs to accommodate EMT
- Cast from high strength corrosion and weather resistant aluminum alloy

Standards

- UL 514A & 514B
- CSA C22.2 No. 18.1-13 & CSA C22.2 No. 18.3-12

Aluminum Mogul Conduit Bodies

Application

Used with threaded rigid conduit or IMC for providing access to the interior of a conduit system for pulling, splicing conductors that are stiff due to large size or type of insulation. Mogul bodies provide longer openings to prevent sharp bends and kinks during installation.

- Longer body facilitates pulling of larger conductors
- Cast covers provide additional wiring area
- Cast from high strength corrosion and weather resistant aluminum alloy
- Pre-assembled with fiber gasket

Conduit Body Covers

Application

Used in conjunction with gaskets when assembling conduit bodies to cover openings

- Stamped and die-cast aluminum covers used with aluminum conduit bodies
- Stamped steel covers used with iron conduit bodies
- Cast covers used with ductile iron conduit bodies
- Includes captive zinc plated, steel mounting screws
- Stamped and die-cast from aluminum alloy or stamped from zinc plated steel or sand cast from ductile iron

RIGID FITTINGS

Conduit Body Gaskets

Application

Used with aluminum conduit bodies to seal enclosure with covers

- Available in fiber and rubber
- Form 5 rubber gaskets used with Form 5 conduit bodies to seal enclosure
- Form 5 can be converted to open type gaskets by tearing out center section along scored line

Conduit Bushings

Application

Used to terminate rigid conduit or IMC to an enclosure

- Bushing throat provides a smooth surface to prevent damage to wire during pulling
- Available with 150°C rated insulator, 105°C rated insulator, or without insulator
- Available in zinc plated, high strength ductile iron or high strength zinc alloy

Standards

- UL 514B
- CSA 22.2 No. 18

Intersystem Bonding Bridge

Application

Used in residential and commercial applications to ground up to 4 systems to a single location

- Meets 2011 NEC Clause 250.94 for Intersystem Bonding Termination
- Lay-in style connection for up to 4 auxiliary ground wires - 1 more than NEC requirement
- Available in die-cast zinc or copper alloy , or aluminum
- Plastic cover provides an aesthetically pleasing installation and provides protection
- Approved for use with solid or stranded copper conductors
- Assembled with stainless steel screws and plastic cover

Standards

- UL 467
- CSA C22.2 No. 41-13

STRAIN RELIEF

One Gang Boxes

Application

May be used as a weatherproof junction box or as a housing for electrical devices in wet, damp or dry locations

- Rugged, seamless die-cast construction prevents moisture penetration
- Tapered internal NPT threaded hubs comply with NEMA requirements and accept threaded conduit fittings or threaded conduits for a secure installation
- Powder coated for maximum corrosion resistance
- Closure plugs, ground screws and mounting lugs included
- Available in bulk or custom shrink wrapped packaging

Standards

- UL 514A
- CSA C22.2 No. 18.1-13

METALLIC WEATHERPROOF

Two Gang Boxes

Application

May be used as a weatherproof junction box or as a housing for electrical devices in wet, damp or dry locations

- Rugged, seamless die-cast construction prevents moisture penetration
- Tapered internal NPT threaded hubs comply with NEMA requirements and accept threaded conduit fittings or threaded conduits for a secure installation
- Powder coated for maximum corrosion resistance
- Closure plugs, ground screws and mounting lugs included
- Available in bulk or custom shrink wrapped packaging

Standards

- UL 514A
